ABOUT US

Turn transactions into rewards

TxtFi is a multi-chain DeFi staking platform where users can deposit their digital assets to receive stable interest.

With TxtFi, earn interest on global decentralized financial assets where rewards are generated directly from the blockchain — no intermediaries, no strings attached.

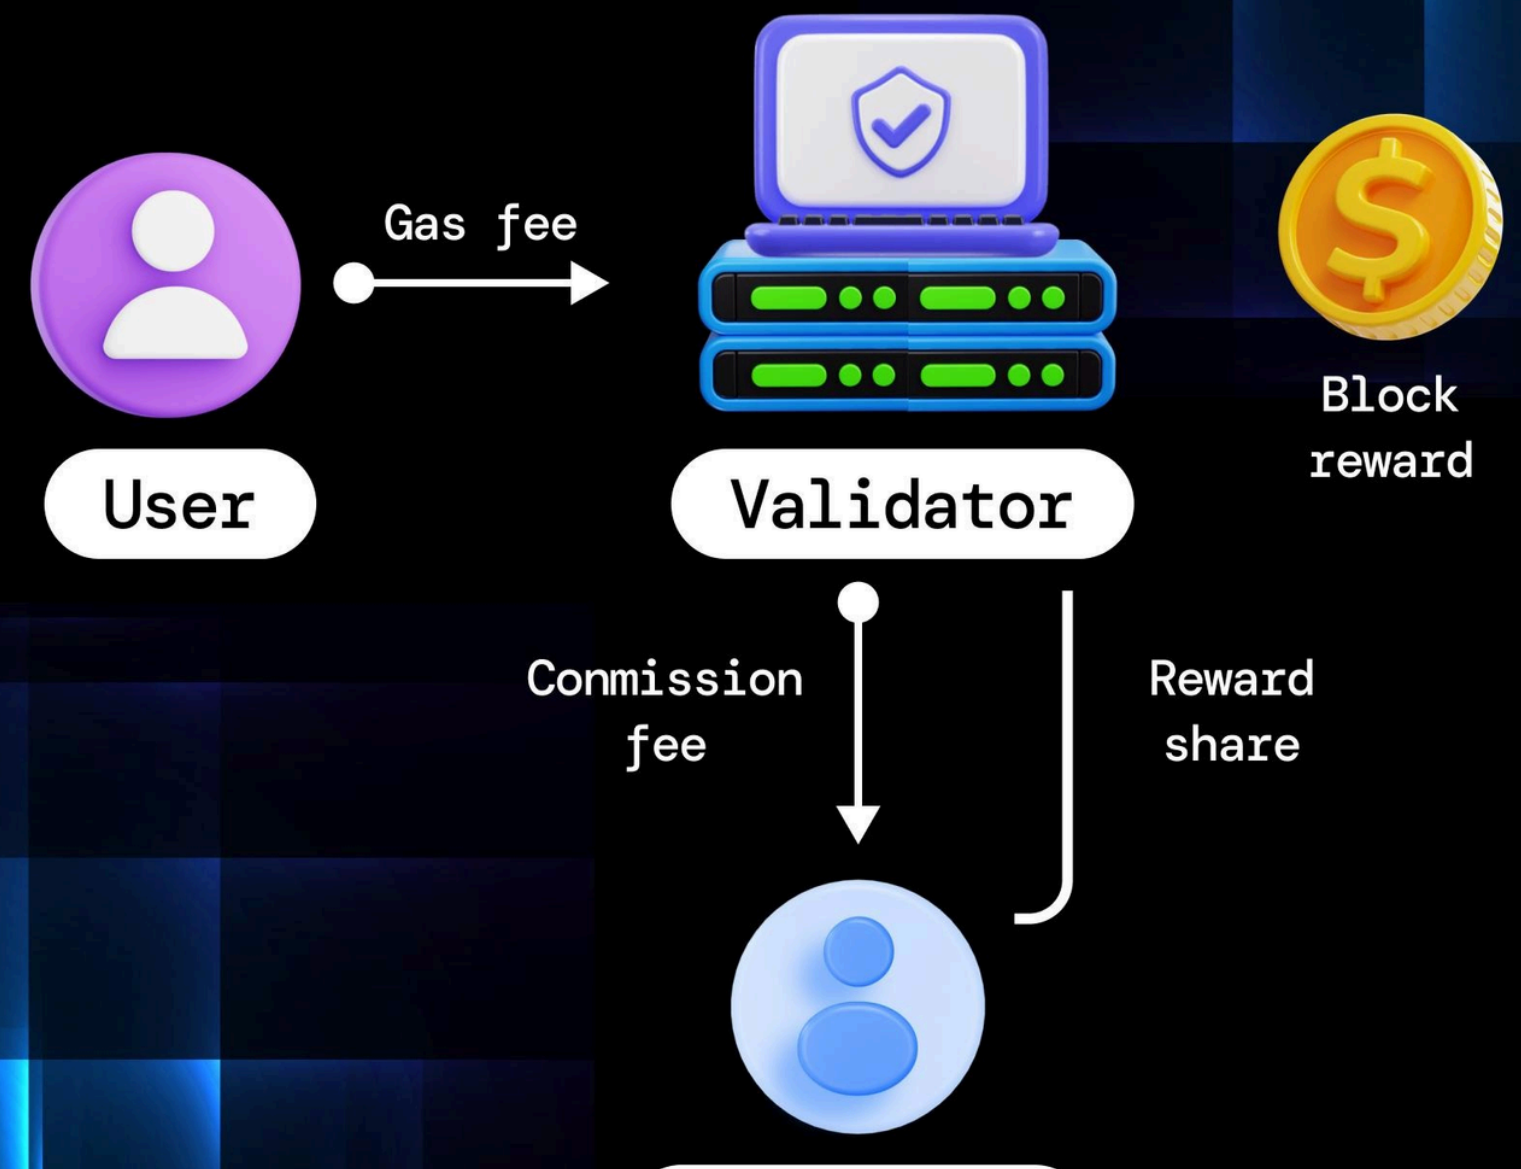

TXTFI – THE VALIDATOR BANK OF THE DEFI ERA

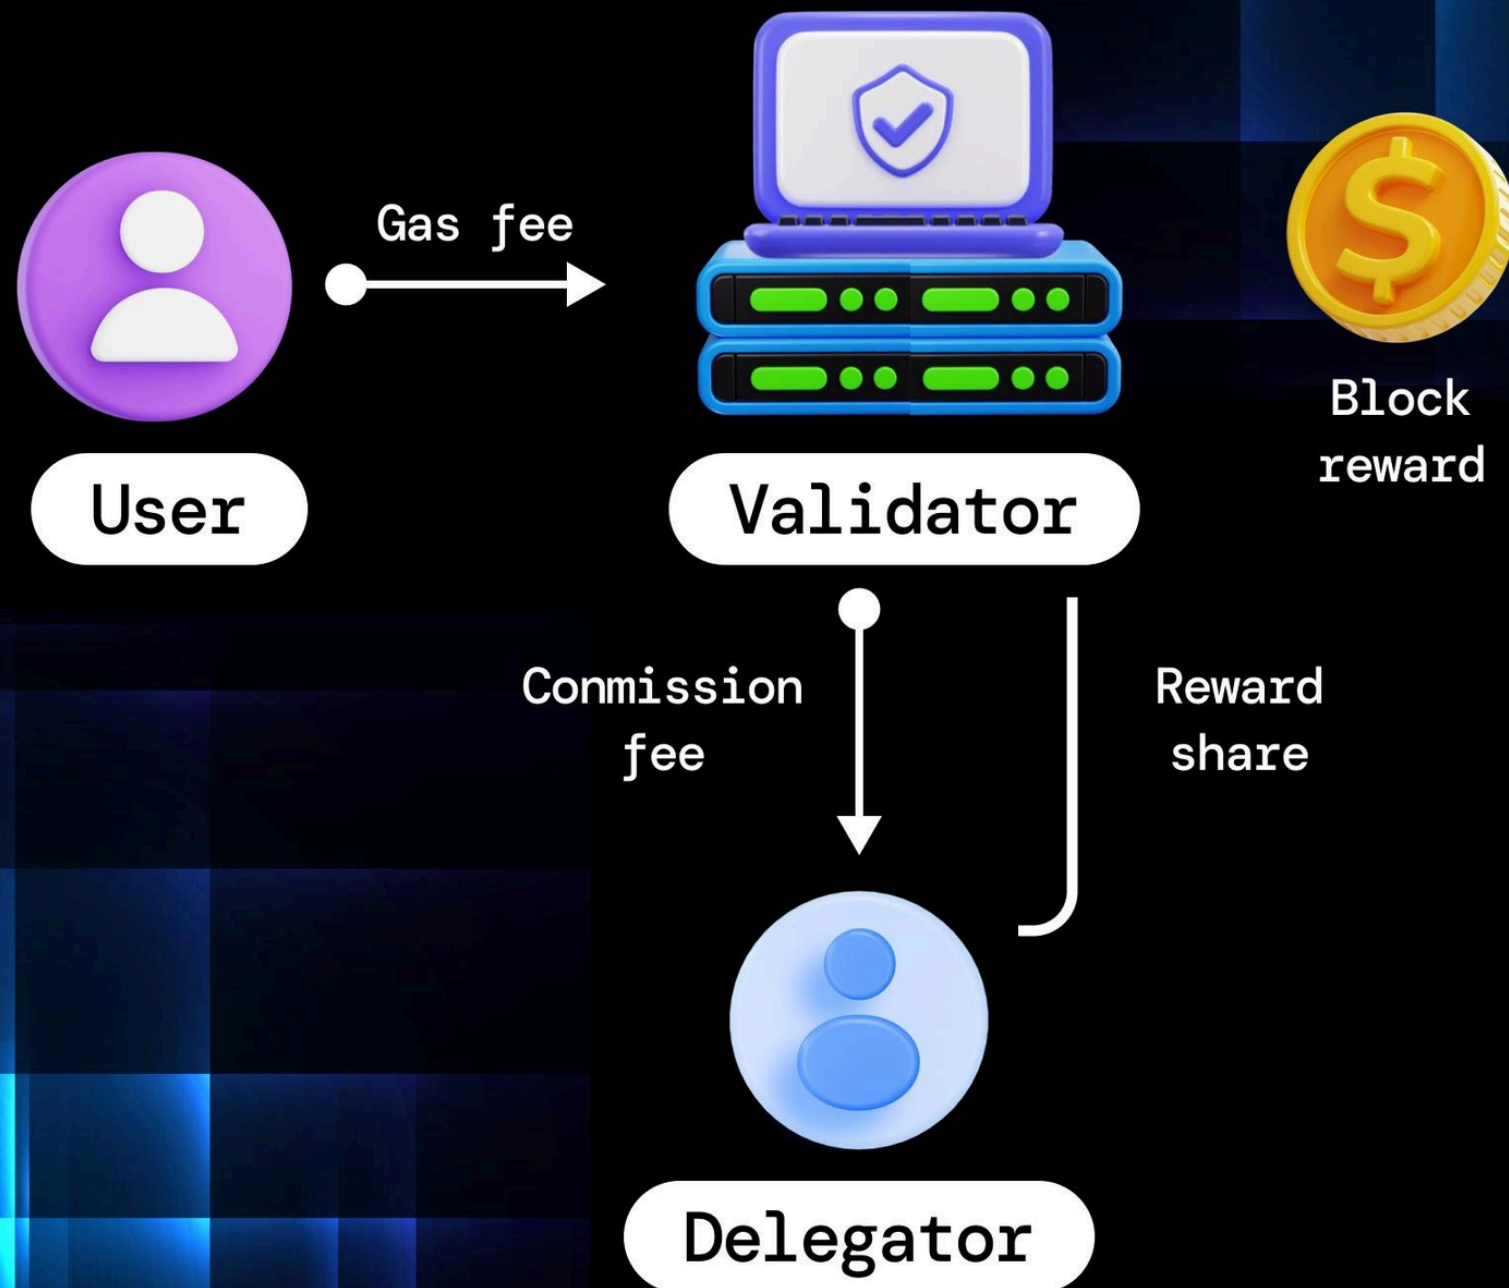

As the blockchain world grows increasingly complex, TxtFi emerges as a decentralized Validator Bank, empowering everyone to participate in the real income streams of leading blockchain networks.

What is a Validator?

- A Validator is the “gatekeeper” of a blockchain — responsible for verifying, recording, and securing every transaction on the network.
- Each time a transaction occurs, validators earn rewards from gas fees and block rewards — the true cash flow of the blockchain economy.
- The more assets staked, the greater the validator’s processing power — and the higher the rewards shared with stakers.

VALIDATOR CASH FLOW

What does TxtFi do?

- Instead of requiring individuals to run their own complex, costly validator nodes, TxtFi aggregates community power into a Validator Pool.
- The system automatically allocates staked USDT across major networks like Solana, Ethereum, BNB Chain, and Polygon, ensuring professional, secure, and transparent operation.

Sustainable Yield

- TxtFi's revenue comes directly from Validator Cash Flow — the real-time rewards generated whenever the network processes transactions.
- After a small commission fee for maintenance, daily rewards are distributed back to users, sharing rewards up to 500% APR.

TxtFi – A next-generation Staking-as-a-Service (StaaS) platform where validator technology evolves into the decentralized bank of DeFi — Transparent. Sustainable. Real.

MISSION

TxtFi was born with the mission of unlocking the potential of digital assets, helping users to:

- Earn automatic interest.
- Participate in flexible staking, no chain or asset limits.
- Increase sustainable profits, based on automatic reinvestment mechanism.

We want to make DeFi simple – efficient – reliable, making the power of blockchain easily accessible to everyone.

PLATFORM TECHNOLOGY

TxtFi is built on a Multi-Chain Infrastructure, supporting many leading blockchains such as Ethereum, BNB Chain, Polygon,... This allows users to stake and receive rewards on any chain they want, while still ensuring:

- High performance: fast transactions, low costs.
- Enhanced security: thoroughly audited smart contracts.
- Flexible scalability: easy integration of new blockchains in the future.

TxtFi's technology provides a unified staking platform where every asset has the opportunity to grow.

STRATEGIC PARTNERS

The TxtFi platform is built and partners with leading blockchain networks:

- BNB Chain (BSC) – low fees, high speed, user-friendly.
- Ethereum Chain – pioneering DeFi platform, top security.
- Polygon Chain – Layer-2 scaling solution, fast and economical transactions.
- Arbitrum One – optimized Rollup technology, expanding Ethereum's processing capacity.
- OP Mainnet (Optimism) – Powerful Layer-2 to increase speed and reduce costs for dApps.
- Avalanche Network – high performance, near-instant transaction confirmation time.
- Gnosis Chain – blockchain solution aiming at transparency and community.
- Klaytn Mainnet – powerful enterprise platform, supported by Kakao.
- Base Mainnet (by Coinbase) – a secure and reliable extended Web3 ecosystem from Coinbase.
- Cronos Mainnet – Crypto.com's blockchain, supporting DeFi and Web3 with high efficiency.

SOURCE OF INCOME

TxtFi's income comes from cash flow sources:

1. Network Validation Fees – similar to mining rewards.
2. DeFi Liquidity Rewards – rewards for providing liquidity on decentralized exchanges.
3. Lending Protocols – profits from lending out secure collateral.
4. Cross-chain Yield Optimization – automatic yield optimization across different chains.

Every process takes place transparently on the blockchain, allowing users to track their real money flows at all times.

STAKING POLICY

TxtFi offers a flexible and transparent staking program for all members:

- Fixed profits according to APR, calculated based on the staked capital.
- Minimum participation level: only from 100 USD to start receiving rewards.
- Profit limit (Maxout): up to 500% of the total staking value - when reaching this threshold, users can reinvest to continue receiving profits.

OPERATION PROCESS

Just 4 steps to get started with TxtFi:

1. Connect Web3 wallet: Use MetaMask or Trust Wallet.
2. Select network: Ethereum, BSC, Polygon, etc.
3. Enter staking amount: Confirm on-chain transaction.
4. Get rewards: Automatically transferred to wallet every day.

INCOME MECHANISM

- Rewards come from on-chain staking on major networks.
- APR (Annual Percentage Rate) represents the estimated annual return.
- APR changes dynamically based on supply and demand and network performance.
- Returns are distributed transparently and directly to user wallets every day.

POLICY FOR KOL

Team Bonus:

- For every 3 new F1s, each with a staking package of 500 USD or more, you will immediately receive a reward of 50 USD.

Referral Bonus:

- F1: receive 15% staking rewards.
- F2: receive 8% staking rewards.
- F3: receive 5% staking rewards.

Rewards from F4 - F12 require 3 F1 participants:

- F4 - F5: 2% staking reward.
- F6 - F12: 1% staking reward.

THANK YOU
